Joke for the week:

Two Irish fellows that were working for the City and a office supervisor noticed that one man digging a hole and the other was filling the hole. He approached the men and asked them why were they doing this because it seemed like a waste of time and the cities money.

One of the man replied, O' we usually have a 3 man crew but the third fellow couldn't make it today, and he's the one who plants the trees.

Program

JD introduced Linda Patton, who spoke on how thoughts impact our lives and gave tips that help improve and understand your mental approach, which will help us in our business.

Linda focuses on human behavior and thoughts that we process in our brain. Which are conscious and unconscious. We are unconscious 95% to 99% of our life. We don't have to think a ton on a daily basis because our unconscious takes over.

Our conscious thoughts takes over when we are working, dealing with important matters or stressful situations. Electric charges in the brain help create our thoughts. (Toni Intintoli realizes that he hasn't woke up in the early morning with his heart racing in a long time).

Feelings are unconscious, changing them are not as easy as it sounds because they are real. Changing the actions do not necessarily change the results. How many thoughts do we average in a second? at least 30 seconds every second. Most of them we do not recognize.

Linda offered a ten dollar bill and DK scampered up to the podium and grabbed the money. Moral of the story is take action. Rules are running our life. We miss opportunities because of rules or because we don't take action.

If you want to find out solutions, contact Linda and get some great advice on how to become a better thought processor.
